

## BeetleBlock Application Grid for Areas Greater than 1/2 Acre

### Instructions:

Please use poly gloves when handling, and start by placing BeetleBlock dispensers in a line on the edge of the *up-wind* side of the area to be protected. Continue in a grid placement based on the number of dispensers suggested per acre. If extra dispensers are left after initial placement, distribute throughout the entire area or in regions with higher concentrations of susceptible trees. Place on larger trees rather than smaller (if there is a choice) at a height of 6-12 feet above the ground. Use a heavy duty staple gun or nail to each tree. Staple or nail *only* through the colored tab at the top of the dispenser. BeetleBlock is not effective in high-infestation areas such as Grand Lake, but since Pinewood is considered a light-to-medium Beetle-kill area, suggested grid placement rates are as follows:

Number of dispensers per acre	Spacing
25	42 x 42
30	38 x 38

NOTE: In practical use spacing is approximate, so pacing the distance is accurate enough.
